

ULTRA-SPAN PANELS

PRODUCT FEATURES

- Load-bearing, structural capability
- Mechanically-seamed profile
- Suitable for low slope application
- Optional Shadow Rib or Stiffening Ribbons available

Utilizing a traditional mechanically-seamed male/female interlock seam profile and deep, 2" seam height, Ultra-Span provides a versatile combination of water tightness and structural performance. Ultra-Span allows for thermal and structural expansion and contraction through the use of a concealed, two-piece clip assembly while maintaining a UL90 wind uplift rating. This system is exceptionally well suited for applications where roof spans are long and/or low or in open-span configurations. Available in a variety of widths and produced from a number of different substrates, Ultra-Span is a uniquely versatile panel system. Please contact Coated Metals Group for complete test results, load tables and specifications.

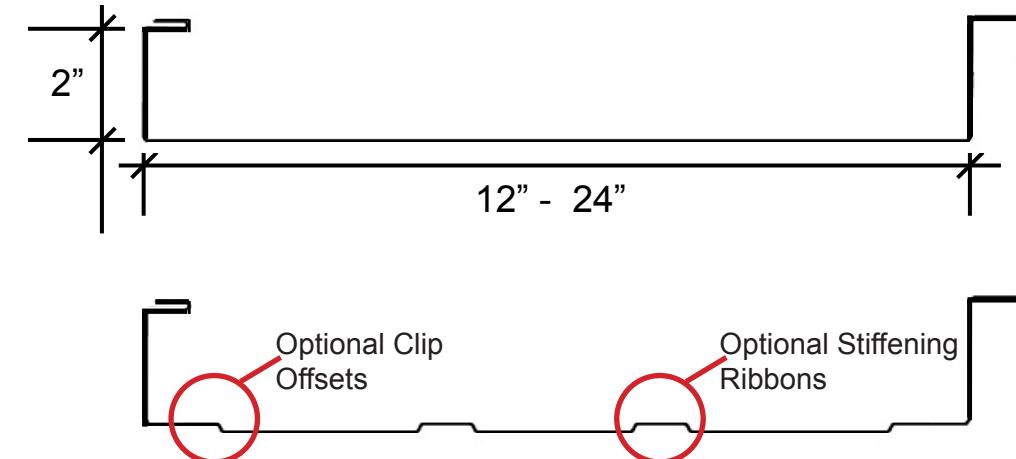

ULTRA-SPAN

ASTM TESTS

- ASTM E1592 Uniform Static Air Pressure tested
- ASTM E283/1680 Air Infiltration tested
- ASTM E331/1646 Water Infiltration tested

PROFILE
